Lebensmotto - 4M - Man muss Menschen mögen....

December 12, 2023, Patrick was Erdem's client

I had the opportunity to work on two migration projects with Erdem. Each project took only six months time grace to his engagement. This is a tremendous performance. He works very conscientiously, precisely, and gets straight to the point. He addresses issues and suggests possible solutions. The quality and quantity of his work is excellent. A consultant who follows the motto 'Don't talk' - 'make it happen'. It is a pleasure to work with him.

Manager name: Alexander Rehm
Job title: CTO
Company name: SmartSpace
The project worked on together: Service Fabric Orchestration

On 

I had the pleasure of having Erdem work with me for the past 5 months on our Workplace platform. We were in need for a DevOps / CI developer who would be able to develop our cloud and on-premise pipeline, starting almost from scratch and developing a means to deploy modules, services and service managers across Service Fabric clusters, not only into Azure environments but also packaging these up for on-premise deployments.

Manager name: Ross Young
Job title: Team Leader
Company name: Scottish Government
The project worked on together: Funding and Options

Service Delivery Team Leader at Scottish Enterprise

March 19, 2018, Ross managed Erdem directly

All LinkedIn members

I had the pleasure of working with Erdem for around 6 months when he joined us as our Dev Ops Engineer, he is a very talented highly intelligent individual. He is very passionate about finding efficient ways of teamworking and following Agile methodologies to challenge the status quo. He brings with him vast knowledge and experience, in our project in particular he brought us on leaps and bounds in our understanding of many areas, including: continuous integration and deployment, automation, monitoring, docker and containers. Ultimately what was delivered was a secure online space (Azure) for users to log on (Microsoft B2C) and transact with our organisation with two way integration with CRM (Microsoft Dynamics), there was also the added complication of a document upload and virus checking process (meta defender). Erdem's contribution ensured the solution was robust, secure (external penetration test passed) and delivered on time. Without Erdem being able to focus on a minimal viable product this would not have been possible. He built what was required but kept a backlog of work that would be required to allow the solution to scale and to meet best practice in some areas after release. I doubt you'll have worked with someone like Erdem before, he brings a lot to the table including his very unique personality.

Manager name :	Faiyaz Shaik
Job title:	Solutions Architect
Company name:	Scottish Enterprise
The project worked on together:	App Services CI/CD implementation
